
Instructions For Split Ring for WPS Field Sign

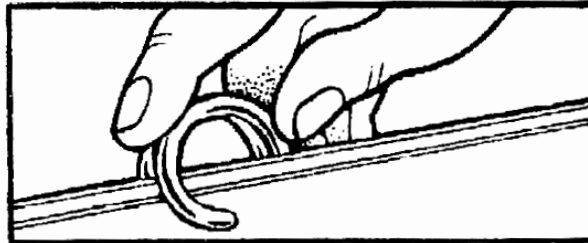

Dear customer,

Our light gauge WPS field signs (Item No. D2310 or D2398) may not stay in the aluminum sign holders when out in the wind. To be sure they stay in place, we have enclosed a split ring for each sign holder and sign. If you ordered our corrugated style of sign, you will not need the split ring(s).

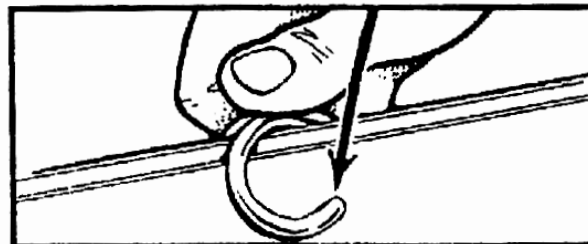

Instructions for thin gauge plastic sign

Lock signs into the sign holders as follows:

Open split rings
against the top
of the sign holder

Push the sign and holder
into the center of the ring
(as though putting a key
on a key ring)

Simply push the
ring down to lock
sign in place.

If you have any questions, please feel free to give us a call at 1-800-874-4755.
