Keep deer away with NO fencing!

Made in USA
Swedish Formula

Protect your GARDEN

Plantskydd®

REPELLENT

DEER • RABBITS • ELK

Longest lasting, year round protection for your garden & landscape

PROVEN EFFECTIVE FOR UP TO 6 MONTHS

Soluble Powder Concentrate

Ready-to-Use Spray

Granular Shaker Paks

#1 Most Tested • Most Effective • Longest Lasting

Testimonials

We have tried all the other deer repellents...

“Reynolds Plantation is a 7,000 acre upscale resort and residential community on Lake Oconee, just outside Atlanta. We have a very natural setting with a very large deer population. We began to try out *Plantskydd* and were initially rather skeptical because we have tried all the other deer repellent products and did not see very good long-term results. However, after just a couple of *Plantskydd* applications, we were beginning to be impressed. And today, we are still impressed!

Plantskydd is mainly used for our annual color plantings (pansies and violas in the winter season and begonias, petunias, impatiens, salvias, etc. in the summer season) and has had remarkable results. The season prior to using *Plantskydd*, we averaged deer browsing on approximately 75% of the plant material used. The next season was a different story completely—less than 10% deer browsing on the color plantings. And that was during the winter season when the browsing is usually much more severe!

We have since used the product on all types of landscape plantings, including new installations and on plants that have normally been very susceptible to deer damage, and have found the same results as with the color plantings. With the results achieved in our use of *Plantskydd*, we have also recommended it to our property owners, who are equally impressed with the results. **Several of the property owners who have used *Plantskydd* have since dismantled their electric deer fences** that surrounded the perimeter of their property, thus creating a more pleasing outside appearance for their home.

And it's not just the Owners Association and property owners that are impressed. Being a resort community with 81 holes of the finest golf in the country, we have a steady stream of visitors who are amazed as they ride throughout the property and see deer everywhere, yet very little damage to our landscape plantings. This makes us very happy to have found such an effective product that has helped ease one of our most persistent struggles. Thank you again for such a wonderful product!”

—Lee Padgett, Landscape Manager, Reynolds Plantation Owners Association, Georgia

You don't have to respray after each rain...

“Last August I replanted my entire iris garden—350 varieties. The last time I did that 4 years ago, deer came and pulled up over 70 newly planted varieties, scattering labels and rhizomes all over the beds.

We had a bag of *Plantskydd* Deer Repellent leftover from a reforestation project. I spoke with a *Plantskydd* representative and he stated I could test it on my irises and recommended that I use it at half strength. I did so, and although I saw some evidence of deer in the bed before applying *Plantskydd*, there was NO further evidence of deer visiting my iris garden. None at all.

I sprayed about 40 rose bushes and had only two nibbles and then they were left alone. I was finally able to enjoy my roses. What a bonus!

While *Plantskydd* seems expensive at the outset, one advantage I really like is that you don't have to re-spray after each rain. I've recommended it to so many people and have told them to be on the lookout for a product that really works.”

—Marlene Johnston, Orofino, Idaho

Testimonials

I think it's better than fencing!

“In the 13 years that I have worked for the College of the Redwoods, I have tried many commercially available repellent remedies for the problem of browsing deer. Amazingly some worked, but none of them for very long. We were losing the battle to save our landscape from depredation so severe that some of our trees and shrubs were in danger of dying. Then our local Agriculture Commissioner told me of a new product—*Plantskydd*—that was supposed to be effective in repelling deer. He also told me it is so safe it isn't even regulated by the EPA!

I ordered a sample amount just to give it a try. Wow, what results! The deer stayed completely away from those plants that were treated. Even after weeks of rain, deer did not return to those plants for over a month. I immediately ordered a larger shipment of *Plantskydd* and began a program of treating the more than two-dozen species of ornamentals that were being impacted by the deer. We've been using *Plantskydd* for almost two years now with about 95% efficiency. We are even starting to replant species that we had given up on as being impossible to grow in our deer infested environment. I think that it's better than fencing!”

—Steve Sandeen, Head Gardener, College of the Redwoods, California

Rabbits and Voles...

“My biggest problem has always been voles, and I didn't expect that *Plantskydd* would work on them, but I haven't had any vole damage since spraying with *Plantskydd*. I am thrilled! My flowers are more beautiful than they have been in decades. No deer damage, no bunny damage, no vole damage!”

—Cheryl Martin, Franktown, CO

“I love this product! I applied it in early spring to all of the perennials and spring flowering bulbs that the rabbits usually chomp to the ground and for the first time EVER—not a nibble.”

—Kim Green, Simi Valley, CA

EPA Statement

In the United States, **dried blood** is an EPA (Environmental Protection Agency) exempted product/minimum risk pesticide and is exempt from the Federal Insecticide, Fungicide, and Rodenticide Act requirements, specifically under Section 25(b) (c.f. Federal Register, 61(45), Mar. 6, 1996) and therefore is not subject to federal registration.

“The EPA has determined... that the use of these pesticides poses insignificant risks to human health or the environment... **The agency... is responding to society's increasing demand for more natural and benign methods of pest control...**” — May 6, 1996 USA—EPA

Plantskydd acts as an organic fertilizer...

Plantskydd's active ingredient, dried blood, has long been recognized as an organic fertilizer. Studies performed by Pennsylvania State University showed that the use of *Plantskydd* on a variety of flowering plants resulted in a fertilizing effect.

“All plants tested that were treated with *Plantskydd*® were larger, had more flowers and generally had greener leaves. This response is typical of the response created by an increased level of fertilization.”

—E. Jay Holcomb, Professor of Floriculture, Department of Horticulture, Pennsylvania State University

Independent test results prove **Plantskydd out-lasts and out-performs all other repellents.**

What is Plantskydd?

Developed in Sweden in 1991 to protect tree plantations being decimated by deer, moose, and rabbits—while also meeting strict environmental laws. **It is equally effective protecting: flowers, fruit trees, gardens, ornamental shrubs, conifer and broadleaf plants.** It is now **Made in the USA** from 100% natural ingredients: dried blood (porcine and/or bovine), vegetable oil, and water.

Is Plantskydd safe to use?

YES! *Plantskydd* contains no synthetic additives, is non-toxic, and is not harmful to animals or the environment. *Plantskydd's* active ingredient (dried blood) is recognized by the US Environmental Protection Agency as an environmentally safe ingredient and exempt from federal EPA pesticide registration. (See EPA statement)

Can I use Plantskydd on my vegetable garden?

Yes! *Plantskydd* is safe for use in protecting fruit, vegetables and other food crops against animal browse damage. *Plantskydd's* soluble powder concentrate formulation was the first animal repellent to be 'OMRI Listed' (trw-9589) by the Organic Materials Review Institute as "suitable for use in the production of organic food and fiber." NEW **Granular Plantskydd** is also 'OMRI Listed' (trw-731) and USDA approved for organic gardening.

Plantskydd is a Proven Leader!

- #1 Most Tested
- #1 Most Effective
- #1 Longest Lasting

Acts as a fertilizer
Rainfast in 24 hours
100% Organic—OMRI listed

Why does Plantskydd work so well?

Animals avoid plants before they bite—not after! *Plantskydd* repels by emitting an odor (not unpleasant to applicators) browsing animals associate with predator activity—stimulating a fear-based response that will have garden feeders looking for somewhere else to dine. Research proven more effective than other repellent systems.

"Studies investigating trends in efficacy of deer repellents indicate that, of the 20 products tested, repellents with active ingredients that emitted sulfurous odors i.e., bloodmeal or egg solids, generally provided the best results."

—Dr. Dale Nottle, Dr. Kim Wagner, USDA / APHIS, **National Wildlife Research Center**, Olympia, WA. *Advances and Challenges in Forest Regeneration* (2000)

Over 50+ Field Tests* conducted in Canada and the USA since 1994, by foresters, professional growers and landscapers confirmed *Plantskydd's* unmatched plant protection efficacy against: **deer, elk, moose, and rabbits.** *View test results and Professional User testimonials at: www.plantskydd.com

NEW Granular *Plantskydd* is proven effective against: rabbits, voles, squirrels, chipmunks, hares, nutria, opossum and other small critters—as well as deer and elk.

What Plantskydd formula is best for me?

For large herbivores—**Deer, Moose and Elk**—use **RTU Liquid Plantskydd** (including Soluble-Powder-Concentrate that you mix):

- 1 quart / 1 litre spray Bottle—protects approx. 100 plants, 1 ft high.
- 1.3 gallon / 5 litre Jug—protects 400-600 plants, 1 ft high.

Soluble-Powder Concentrate Plantskydd:

- 1 lb / 454 g—protects approx. 200-300 plants 1 ft high.
- 2.2 lb / 1 kg—protects approx. 440-660 plants 1 ft high.
- 22 lb / 10 kg Bulk*—protects 4400-6600 plants 1 ft high.

*(Ideal for agriculture, golf course applications, and municipal landscaping)

For small herbivore Critters—**Rabbits, Voles, Chipmunk, Squirrels, Nutria, Opossum, etc.**, use **Granular Plantskydd**:

- 1 lb— protects approx. 600 sq. ft.
- 3 lb— protects approx. 1,800 sq. ft.
- 7 lb— protects approx. 4,200 sq. ft.
- 20 lb*— protects approx. 12,000 sq. ft.

*(Ideal for agriculture, golf course applications, and municipal landscaping)

How often do I need to treat my plants and trees?

- For best protection, treat plants before browse begins in spring or fall.
- *Plantskydd* powder concentrate lasts **up to 6 months over winter** on dormant plants, and **3-4 months during the active growing season.**
- **IMPORTANT**—spray liquid *Plantskydd* on **dry** plants—allow to dry thoroughly for at least 24 hours.
- With proper application, *Plantskydd* is rain-resistant and does not require re-application after watering or rainfall.
- **Always treat new growth**—until plant has reached full size or leaf-out.
- Ideally, liquid *Plantskydd* is sprayed in the morning, or late afternoon, when the sun is not as strong.
- **Granular Plantskydd may be applied at anytime.** Re-treat as required.

How should I store Plantskydd?

Protect from heat. Store in cool, dry, dark location. Keep from freezing.

- **GRANULAR**—lasts 5+ years when stored as directed.
- **READY-TO-USE LIQUID**—use within 3 months of opening the sealed container. Apply unused solution as a fertilizer.
- **SOLUBLE POWDER CONCENTRATE**—in its original packaging, the concentrate lasts 5+ years. Tightly re-seal unused powder. *Plantskydd* is a 100% natural product and will start to *go off* in warm weather. **Once mixed into solution, use within a few days.** Apply unused solution as a fertilizer.

Will Plantskydd hurt my dog?

Some users have reported that the family dog is quite enamored with *Plantskydd* when it is sprayed and still wet on the plants. It will not harm animals, but it's best to leave Fido inside until the treated plants are dry.

Deer Repellent
Repels deer, moose, elk and rabbits.

Rabbit & Small Critter Repellent
Repels rabbits and small critters, including chipmunks, squirrels, voles, nutria and opossum (deer & elk too!)

How can I protect fruit trees?

Treat prior to, or 2-3 weeks after bud-flush. Avoid treatment while buds are forming. Treatment over foliage is enough to deter browsing herbivores.

Whips—if you're planting young fruit tree whips, dip them in *Plantskydd* solution before planting, or try coating the whip using a paint brush. Then spray trees when the leaves have formed.

Any plants I should avoid treating with Plantskydd?

Plantskydd will darken leaves temporarily. They return to their normal color in a couple of days. We suggest you test samples of sensitive plants (e.g., roses) before treating large numbers. If leaves curl on test plants, rinse with a fine spray of water and dilute *Plantskydd* solution further. To prevent leaf curl, water plants well **at the roots** before treatment.

Note: For aesthetic reasons, use of a concentrated solution on very fuzzy leaves like Santolina, Lamb's Ear and Lavender is not recommended—dilute solution using more water if necessary. Fortunately, these plants are usually not preferred by our furry friends.
