

# Garlic Oil Dispensers Help Deter Wildlife

Deer and other wildlife that are in pursuit of food and water may wind up on your property and either trample or chew up your crops or ornamental plants. This can lead to significant damage and a loss of profit. Garlic is one deterrent that can help discourage these unwanted visitors from invading your land.

Garlic Oil Dispensers should be placed four to six feet apart around your fruit, nut or vegetable crops or ornamental plants. The foul smell of the garlic prompts deer, rabbits and other critters to go elsewhere before they start feasting on your plants. If necessary, increase the number of dispensers used until the feeding stops.

Each dispenser lasts up to six months. For best results, apply before feeding habits are established. Dispensers come in blue and green, and may be purchased in 50 or 250 count bags. The green dispensers are identical to the blue, but blend in better with the color of your plants.
