

**NO-SPILL®**  
Research, Inc.

THE ORIGINAL NO-SPILL GASOLINE CAN  
Manufactured by No-Spill Research Inc. since 1989

## *Not your average gas can !*

*"The most user friendly, precise pouring can on the market..."*

*"Everything from trimmers to tractors - anything with a fuel tank..."*

*"The only can that lets me fill my chainsaw without spilling or overflowing..."*

No-Spill® unique features:

- **Professional Quality** - Intended for the high-end home owner or professional user. High Molecular Weight HDPE can body, all Viton® seals, and Stainless steel internal spring for trouble free operation and long service life.
- **Self venting, self sealing** - Just pick up, tip, and push the button to pour. No vents, no caps, no spouts, no funnels. A true pickup and pour system.
- **Faster flow** - Flows up to 3 gallons per minute. Faster than any other brand of controllable nozzle.
- **Flow control** - Allows filling even the smallest tanks without spilling or overflowing. Start when you want, stop when you want. Put the spout into your tank opening then start the flow. No more trying to get the spout into the tank opening before the fuel comes out. We fill shot glasses in our demos. Also stops flow automatically when the tank reaches full.
- **Thumb Button control** - The only fuel can on the market with a thumb button control. Other brands of controllable nozzles pour by pressing down on the lip of the target tank, which can be difficult in some applications and even upset small equipment.
- **Quart & Liter markings** - Molded into the can for easy reference and mixing.
- **Stainless Steel Screen** - 20 mesh stainless steel screen filters out debris while pouring.
- **Low Profile can body** - No-Spill® cans have a wide stable base and low profile. Far less likely to upset than other can designs, especially the jerry style cans.
- **Tapered spout** - 7/8" O.D. spout tip fits into everything from chainsaws to autos. Many of the new controllable spouts on other brands will not fit into smaller tank openings.
- **Dust cap** - Included to protect spout from dust and debris.
- **Lifetime guarantee**. If a No-Spill® can or nozzle leaks or fails in normal use, we simply replace it, no questions.

No-Spill® Product Lines:

- Our **CARB** fuel cans comply with California Air Resources Board regulations. They automatically stop the flow when the target tank reaches full, reclaims displaced fumes while pouring, single opening for both filling and pouring, specially treated to meet low permeation requirements for California. (CARB compliant fuel cans & nozzles are required for retail sale in California, Delaware, Maine, Maryland, New York, Ohio, Pennsylvania, Connecticut and some counties in Virginia)
- Our **nonCARB** fuel cans offer all the same features as our CARB line but at a lower cost because the can bodies are not specially treated to meet the environmental permeation regulations required by CARB.
- **Multipurpose Containers** are available in all three sizes. These containers/dispensers are the same as our nonCARB cans but are translucent and great for fleet service, janitorial supplies, agricultural chemicals, and nearly any liquid except gasoline, kerosene or diesel.
- **6" Flexible Spout Extension** accessory fits all No-Spill® cans and nozzles and preserves all of our nozzle features while easily filling automobiles, marine, and other hard to reach or vertical tank openings. Can be stacked together for longer lengths.
