

Instructions for Heavy-Duty Stake Kit

Always stake or weight down your E-Z UP® Instant Shelter®. Take the E-Z UP® down if heavy winds threaten to blow. Do not leave your E-Z UP® unattended.

What's in the Box: (4-6) 14" Metal Stakes, (4-6) Quick Release Pins, (1) Storage Case

Step 1.

Set up the shelter in desired location. Determine where to place the first stake. Move E-Z UP® leg slightly to the side, then drive the stake firmly into the ground leaving the hole in the stake about an inch above the surface.

Step 2.

Insert quick release pin into the hole in the stake and through the E-Z UP® leg. Swing the wire catch around to secure onto the end of the pin protruding from the leg.

Step 3.

Repeat steps at each of the other legs of the shelter. For large shelters with six legs, use stakes on the four outer legs.

Repeat steps in opposite direction to take down.

Warning! Do not depend on stakes to secure shelter in heavy winds. For safety sake, take your E-Z UP® Instant Shelter® down.
